TRANSACTIONAL-UPDATE CHEAT SHEET

Stage it. Reboot. Roll back.

Each transactional-update command creates a new snapshot. Nothing touches the running system until you reboot.

`sudo transactional-update pkg install <pkg>`
Install a package in a new snapshot.

`sudo transactional-update pkg remove <pkg>`
Remove a package.

`sudo transactional-update pkg update <pkg>`
Update a single package.

`sudo transactional-update dup`
Update the system to the latest snapshot.

`sudo transactional-update patch`
Apply available patches.

`sudo transactional-update --continue pkg install <pkg>`
Add to the pending snapshot.

`sudo transactional-update rollback last`
Return to the last working snapshot.

`sudo transactional-update rollback <number>`
Return to a specific snapshot.

`sudo transactional-update cleanup`
Remove old snapshots.

`sudo snapper list`
Inspect snapshots before rolling back.

`sudo journalctl -u transactional-update.service`
Read the automatic update log.

`sudo reboot`
Boot into the staged snapshot.
